

5th March 2015

Roger Meacock MRCVS

Dear Roger,

Thank you for contacting Simple System regarding our policy on agrochemicals applied to our products and in particular, RoundUp. All our forages are harvested green, so application of this herbicide will in any case be inappropriate. It is not our policy to use any cereals, pulses or their by-products, including straw, in any of our feeds. Not only are these not part of a natural diet, but we share your concerns for the chemicals that are inevitably used on these crops. The husks, bran and straw will be where these chemicals are most likely to be concentrated. Wheatfeed, oatfeed, soya husks, rice bran, NIS, etc. are not used in any of our feeds.

We are happy to discuss production methods of our feeds with you or your clients. We have a close relationship with the farmers that grow our feeds for us and work closely with them to ensure any inputs are kept to a minimum. Monitoring and analysis is carried out to a level way above that required by our accreditations and to date, we are the only horse feed company fully registered with The Vegan Society.

Do get back to me if you need any further information.

Kind regards,
Jane.

**JANE van LENNEP BSc., MSc., BHSI(S.M.Cert), NPSD.
Director of Nutrition**

Tel: 01728 604 008 (feed line and first orders)
01371 870 753 (Head Office and other orders; 8.30 – 5.30)
